

Analyse combinations of assessment and benchmark data

Real time progress summaries.

Colour coded graphical reports

Secure, online, always available

Customisable to your school's requirements

Comprehensive Analyses

A wide range of analyses can be performed enabling schools and teachers to identify the progress at the key stage, year group, subject, class and individual student level, facilitating early intervention and improved teaching.

Progress and Benchmark Data

As all assessments, reports and exam results are in one place, comparisons can be made of academic and benchmark data e.g. CATs, FFT, ALIS, YELLIS.

On Demand

Staff can run a specified analysis when required and / or schedule analyses at particular times. Results are automatically emailed to appropriate staff, reducing the burden on data administrators.

Wide Range of Outputs

Data analyses can be visualised graphically (bar graphs, pie charts, line graphs, traffic lights, even "smilies") to suit the range of people e.g. staff, students, parents, governors, inspectors, viewing the information.

osistracker is an Open School Information Services module that enables schools to analyse and track progress in all subjects. Detailed, real time, analyses can be performed at the student, teacher, class, subject, year group, gender, key stage, and whole school level. As with all OSIS modules, osistracker is very easy to use; tailored to your school's individual requirements; is available at home and in school. All backed up with comprehensive support.
