Rapid marking of attendance

Integrated registration and class behaviour

Automated fire and unauthorised absence reports

Secure, online, parental access

Customisable to your school's requirements

## Fast Recording of Lesson Attendance and Behaviour

Staff can quickly take the lesson / registration group attendance and mark relevant behavioural options. The daily attendance record of the class is visible and any known absences for (school trips, sports matches etc.) are shown.

## Bespoke, Flexible Attendance Model

Schools determine the attendance model and focus they require. Attendance in non-timetabled classes can be recorded and ad-hoc variations in teaching times (e.g. after a fire drill) is accommodated.

## Monitoring Patterns

Any report on student absences, including statutory government returns, can be generated. Summary reports for senior staff are easily produced and anomalous absence trends are picked up early.

## Parental Engagement

Parents can view the attendance record of their children via a secure encrypted connection and text messages can be sent to inform of unauthorised absences.

osisregister is an Open School Information Services module that enables schools to capture, analyse and report on students' attendance. osisregister is equally suitable for the traditional morning and afternoon registration in tutor groups and for recording attendance in all lessons throughout the day. As with all OSIS modules, osisregister is very easy to use; tailored to your school's individual requirements; is available at home and in school. All backed up with comprehensive support.
